Summary

Full Stack and AI/ML developer with hands-on experience building production-ready web applications and AI-powered systems. Recently completed a Full Stack Internship at NETSOL Technologies, where I built an AI-powered stock market chatbot end to end, combining full-stack development with local LLM deployment and NLP techniques. Comfortable across the MERN stack (MongoDB, Express, React, Node.js) with practical experience integrating AI/ML models into real applications, designing REST APIs, and working with databases. Looking for an AI/ML role where I can build applied AI features into real products and keep growing as an AI/ML developer.

Technical Skills

Languages: JavaScript, Python, SQL

Web Development: React.js, Node.js, Express.js, HTML, CSS, Tailwind CSS, REST APIs, FastAPI

Machine Learning: Scikit-learn, Pandas, NumPy

Deep Learning: TensorFlow, PyTorch

AI & Data: AI/ML integration, NLP processing, chatbot development, local LLM deployment (Qwen), prompt engineering, model fine-tuning basics

Databases: MongoDB, MySQL, PostgreSQL

Tools & Platforms: Git, GitHub, Swagger, VS Code, Microsoft Office

Experience

Full Stack Intern | NETSOL Technologies - 2026

- Developed an AI-powered stock market chatbot, combining a full-stack architecture with AI/ML capabilities to deliver intelligent, context-aware responses to stock market queries and predictions.
- Built both frontend and backend components, integrating them through REST APIs to serve live market data to the chatbot interface.
- Ran the Qwen language model locally to handle NLP processing, intent interpretation, and context-aware response generation without relying on external LLM APIs.
- Translated complex requirements into a well-structured, functional software solution with minimal guidance, working both independently and as part of the team.

Education

BS Computer Science (Post-ADP) | University of Education, Lahore - Expected May 2027

ADP in Computer Science | Riphah International College - Sept 2025

Intermediate (ICS) | Punjab Group of Colleges - Oct 2023

Projects

Stock Market Chatbot – AI-Powered Web Application

- Built a full-stack chatbot that answers stock market queries and generates predictions, integrating AI/ML models directly into the application.
- Deployed and ran the Qwen model locally for NLP processing, interpreting user intent and producing context-aware, conversational responses on self-hosted infrastructure.
- Connected the frontend and backend through REST APIs to fetch and serve live market data to the model in real time.

Apex Grooming – Salon Web App

- Developed a full-stack salon booking application with React.js and Tailwind CSS on the frontend and Express.js with MongoDB on the backend.
- Implemented an appointment booking system and an admin dashboard for managing and tracking bookings.
- Designed REST APIs to handle appointments, services, and user data.
